

The book code I wrote was written in:

Windows 64 bit 7  
with the following libraries:

anaconda 4.1.1

numba==0.26.0

numpy==1.12.1

pandas==0.20.3

pandas-datareader==0.4.0

patsy==0.4.1

scikit-learn==0.19.0

scipy==0.19.1

statsmodels==0.8.0

sympy==1.0

When first writing the book, scikit-learn 0.19.0 had not come out. A lot of the book also works with scikit 0.18.1 unless the text says that only 0.19.0 will work for that section.
